

Extra support in maths, English & Reading for ages 5 - 16

After the last 18-months, are you worried about being able to help and support your children with their school and homework?

We understand and solve this by providing comprehensive online tutorial assistance and lessons, with simple reporting to give you instant feedback on each child's activity and progress.

You and your family are supported by a Freephone Helpline staffed by UK Qualified Teachers for maths and English questions, including homework.

This means that, as parents, you don't have to be a maths or English expert, just use the simple tools and support that we provide.

Increased confidence through improved competence

Confidence

Our unique assessment process identifies your child's current level of ability and builds a personalised programme, starting from there. This is carefully structured to ensure early success, building your child's confidence from the start.

Content

With over 2,000 lessons and more than 6 million questions, we have the content to ensure your children get what they need to build confidence and success. Suitable for all students throughout the UK.

Convenience

Available online all day, every day. So, working at home and at their own pace, without peer pressure or embarrassment, each child has the comfort and security of working with you to improve their skills and their confidence in class.

- ✔ Powerful diagnostic assessment identifies each child's strengths and weaknesses
- ✔ Individual courses recognise that each child's abilities are different
- ✔ Accurate starting point ensures early success, which immediately builds confidence
- ✔ Access to the Freephone Teacher Helpline 6 days a week, for help when it's needed
- ✔ One cost for the whole family, not per child - a truly affordable alternative

“I never wanted to be picked by the teacher to answer a question, because I was simply afraid of being embarrassed in front of the class. Now I want to be picked because I do know the answer.”

Catherine T, Westmead

“Where parents are involved in extra work with their children, it can be up to six times more effective than third party involvement alone”
